

Steps:

1. Find the best location.
2. Place it or mount it.
3. Plug it in.
4. Set the timer/controller.
5. Put in the oil.
6. Adjust, maintain, and enjoy.

1. The best location is at least waist high, near an electrical outlet, in a spot that has plenty of air movement, and is not directly diffusing over you or your family's/pets' resting, eating or drinking areas. There is no danger to these areas, it is just a good idea not to disrupt these areas with strong scent.

2. The machine can stand on its own (HINT: use the pad that the fragrance oil is wrapped in to stand the machine on to absorb vibration). To mount it, screw the metal mounting plate onto the wall and hang the machine on it, making sure both tabs catch.

Mounting Plate on the Wall

3. Plug it in. It's okay if the pump runs without the oil installed—it won't hurt anything. Unplugging the unit for long periods of time may erase your settings, but there is an internal battery to preserve settings for short periods of being unplugged. TIP: Use the wire tie on the electrical cord to gather up the slack and to hold the little white key that opens the fragrance oil door; if you have curious kids, hide that key.

Oil Door Key

4. Put in your settings:

1. Set the clock to the current time:
Press SET then UP/DOWN for hour (this is a 24-hour clock so 13:00 is 1:00PM).
Press SET then UP/DOWN for minutes.
Press SET then UP/DOWN for day of week.
Press SET to confirm clock setting.
2. There are 5 events so you can have the machine come on at different times, at

This event comes on at 8:00 AM and shuts off at 10:00 PM every day of the week.

different intensities, on different days.

NOTE: An Event cannot go around midnight, so make sure every stop time is no later than 23:59.

3. Set the first event:

Press MODE and set the time the machine comes on for the first event...

Press SET then UP/DOWN for start hour.

Press SET then UP/DOWN for start minute.

Press SET then UP/DOWN for days of the week for this event.

Press MODE then UP/DOWN to set the hour the machine stops for the days of this first event...

Press SET then UP/DOWN for stop minute.

Press MODE then UP/DOWN for the percentage of intensity. TIP: start at 25%.

Repeat this for the other four events or leave these blank if you just need one event for every day.

This is at 25% intensity.

5.

Put in the fragrance oil.

1. Open the oil hatch on the bottom of the machine with the key and pull out the fragrance oil cartridge by the metal ring—do not twist, it pulls straight out.
2. Unscrew the diffuser cap from the oil cartridge and pour the fragrance oil from the white bottle into the blue cartridge.
3. Screw the black diffuser cap back on.
4. Align the diffuser cap so that the two inlet/outlets are facing away from the wall.
5. Push straight up until you feel it seat into the machine. This just pops in place—no turning at this point.
6. Close and lock the oil hatch with the key.

Pour in the oil.

Screw on the diffuser cap.

6.

Adjust, maintain, and enjoy! A good starting intensity is at 25%, during the high-traffic times of the day, then increase/decrease intensity and run-times from there depending on preference. If you find after a while that you no longer notice the fragrance but it is running okay, it is probably time to switch out your fragrance to something else. We have a tendency to go nose-blind as we get used to fragrances in our own home.

Align the cap this way.

Pop it up in place.

If the diffuser starts to whistle or you suspect that it is not running optimally, it may be time to clean the diffuser. To do this, pop out the cartridge, unscrew the diffuser cap, pour out the fragrance oil into the white bottle that it came in, put some alcohol into the cartridge (you only need enough to get to the first tick mark), replace the diffuser cap, pop the cartridge back in place, and run the machine for a while to let the alcohol clear out any fragrance oil buildup in the diffuser cap. You can use 80-proof vodka if you do not have rubbing/isopropyl alcohol. Pour out the alcohol and replace the canister with the fragrance oil and it should be good as new.
